

Number of Walsh coefficient superior to a treshold

$[w,s,k,n,u,t] = [4,12,19,95,19,25]$

Number of LPN samples: $N = 1024$

Expected number of parity-checks of weight w on \mathcal{N} : $N_{eq} = 14356$

$$\hat{f}(GV_1) := N - 2 \overset{\hat{f}(GV_1)}{GV} \left(N, \log_2 \left(\binom{s}{t-u} \right) \right)$$
