Number of Walsh coefficient superior to a treshold

[w,s,k,n,u,t] = [5,12,25,69,7,13]

Number of LPN samples: N = 256

Expected number of parity-checks of weight w on $\mathcal{N}\colon N_{\mathrm{eq}}$ =511

$$\widehat{\widehat{f}}(GV_1) := N - 2 GV \left(N, \log_2 \left(\binom{s}{t-u} \right) \right)$$
