Number of Walsh coefficient superior to a treshold

[w,s,k,n,u,t] = [7,14,16,29,1,4]

Number of LPN samples: N = 804

Expected number of parity-checks of weight w on  $\mathcal{N}$ :  $N_{\rm eq} = 1609$ 

$$\widehat{f}(GV_1) := N - 2 \underbrace{GV\left(N, \log_2\left(\binom{s}{t-u}\right)\right)}_{\widehat{f}\left(GV_1\right)}$$
