Number of Walsh coefficient superior to a treshold

$[w,s,k,n,u,t] = [7,14,24,50,1,7]$

Number of LPN samples: $N = 4076$

Expected number of parity-checks of weight w on $\mathscr{N}$: $N_{\mathrm{eq}} = 8152$

$$\widehat{f}(GV_1) := N - 2\, GV\left(N, \log_2\left(\binom{s}{t-u}\right)\right)$$
